

845 Fort Stockton Construction Update – May 2008

The excavation of the foundation and parking structure went very well and ahead of schedule. Thank you for your patience during this operation. Over the next month, we anticipate the following operations to occur:

- * Placement of reinforcing steel
- * Placement of concrete foundation
- * Erection of tower crane
- * Foundation wall form work

Please note that during these operations, the traffic patterns will be adjusted as equipment and materials arrive to the job site.

The week of May 19th, we will be pouring concrete for our foundations. The concrete pump will be staged on Falcon Street. Please be aware that traffic patterns will be changing during this time. Concrete trucks will be traveling from Washington to Goldfinch to Fort Stockton and will then be unloading at Falcon Street. We will have Flagmen present during this time to direct traffic as needed.

The erection of the crane is anticipated to take place May 22nd and May 23rd. Please note that there will be lane closures on Fort Stockton and detours will take place during this installation.

The pedestrian barricades are now operational. As a reminder, please use caution when passing by the construction entrances during working hours.

Thank you for your continued patience and support. If you have any concerns please contact Nicole Anderson of CLB Partners Ltd at (858) 847-9100 X 16.
